

# LocateONE™

## LITE

- ✓ Ideal for teams operating in austere, internet-deprived environments
- ✓ Utilizes BK Technologies™ radios as the 'network'
- ✓ BKR 9000/BKR 5000 acts as the location reporting gateway for any BK Technologies™ radio
- ✓ Utilizes a LocateONE™ LITE plug-in for the ATAK application on the agency-issued Android smartphone
- ✓ Uploads user location information to a TAK server, if deployed
- ✓ Cost-effective radio software option that requires no additional hardware, reducing solution complexity, user payload, and training costs

LocateONE™ LITE is an Android plugin for Android Team Awareness Kit (ATAK) that provides real-time visibility of BK Technologies™ radio user locations when operating in offline environments.

It decodes location packets broadcast by the radios and displays the location as a dot on the ATAK map. This means team members equipped with LocateONE™ LITE can see where their teammates are, monitor who's active, and discern emergency alerts—all without needing any cellular or internet connectivity.
